

# Exercícios

Tente resolver manualmente e, em seguida, programe o código para descobrir as respostas

**Exercício:** desenhe *diagramas de classe* para cada um dos conjuntos de classes e interfaces conforme o exemplo e legenda abaixo.

1. public interface Foo { }

public class Bar implements Foo { }

2. public interface Vinn { }

public abstract class Vout implements Vinn { }

3. public abstract class Muffie implements Whuffie { }

public class Fluffie extends Muffie { }

public interface Whuffie { }

4. public class Zoop { }

public class Boop extends Zoop { }

public class Goop extends Boop { }

5. public class Gamma extends Delta implements Epsilon { }

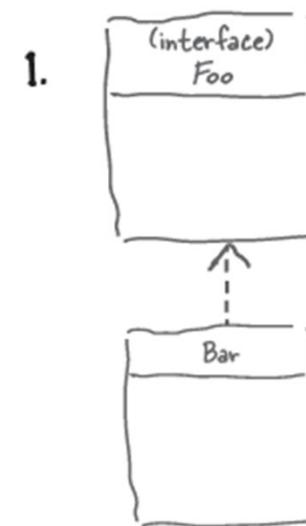

public interface Epsilon { }

public interface Beta { }

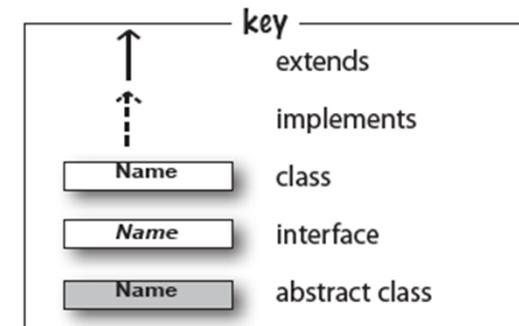

public class Alpha extends Gamma implements Beta { }

public class Delta { }

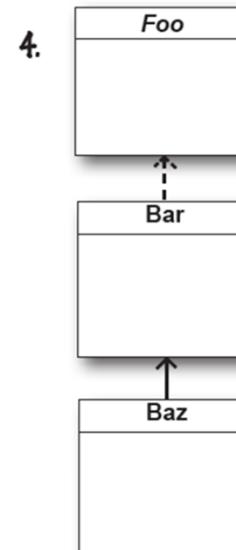

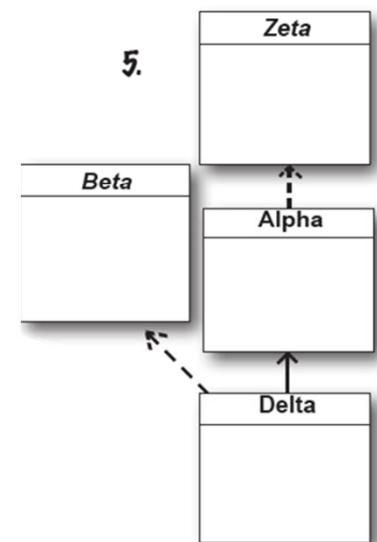

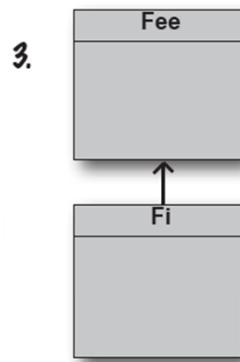

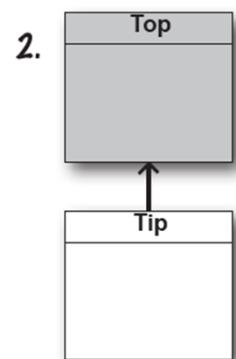

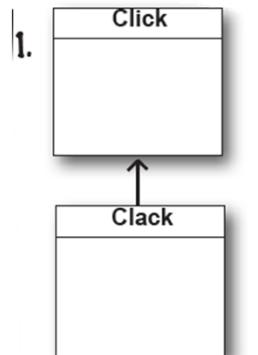

Exemplo:

Legenda:

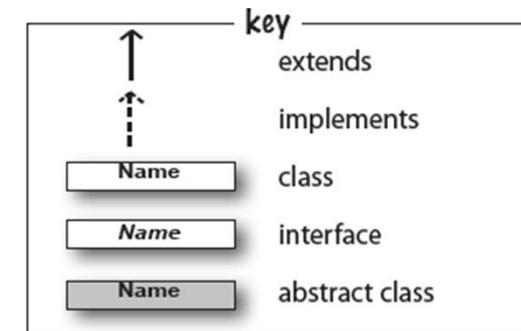

**Exercício:** Dado os *diagramas de classe* abaixo, determine os conjuntos de classes e interfaces conforme o exemplo e legenda abaixo.

**Exemplo:**

1. public class Click { }  
public class Clack extends Click { }

**Legenda:**

**Exercício:** determine aplicações em que as classes abaixo podem ser concretas e abstratas conforme os exemplos.

Concrete	Sample class	Abstract
golf course simulation	Tree	tree nursery application
_____	House	architect application
satellite photo application	Town	_____
_____	Football Player	coaching application
_____	Chair	_____
_____	Customer	_____
_____	Sales Order	_____
_____	Book	_____
_____	Store	_____
_____	Supplier	_____
_____	Golf Club	_____
_____	Carburetor	_____
_____	Oven	_____

**Exercício:** pegue trechos de código da piscina e coloque-os nas linhas em branco do código de modo que o conjunto de classes seja compilado, executado e produza o resultado abaixo.

```

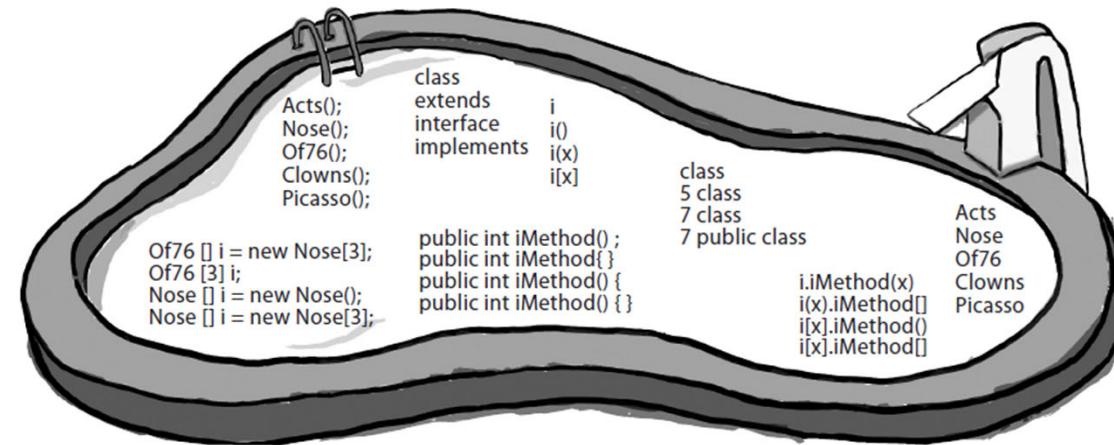

____ Nose {
_____
}

abstract class Picasso implements ____{
_____
    return 7;
}
}

class _____ { }

class _____ {
_____
    return 5;
}
}

```

```

public _____ extends Clowns {

public static void main(String[] args) {
_____
    i[0] = new _____
    i[1] = new _____
    i[2] = new _____
    for (int x = 0; x < 3; x++) {
        System.out.println(_____
            + " " + _____.getClass());
    }
}
}

```

Um trecho de código pode ser usado mais de uma vez, e nem todos são necessários.

## Resultado

```

File Edit Window Help BeAfraid
% java _____
5 class Acts
7 class Clowns
_____
Of76

```
